

New Lube Filters for Cummins Engines – LF9070 & LF9080

Cummins Filtration announces the release of two new lube filters – LF9070 and LF9080, for the 2010 ISX 15L and 11.9L Cummins engines. Equipped with the patented Venturi® Combo design and StrataPore™ media, the new filters are designed to support the increased demands of new emissions regulated engines.

The new filters have been designed to be compatible with pre-2010 Cummins engines, including the Cummins ISX, QSX, ISM, QSM, QSK19, K19 and QST30 engine families. To avoid the need for multiple part number inventory, LF9000 and LF9001 will be phased out with the introduction of the LF9070 and LF9080.

Effective March 1, 2010, LF9070 will replace LF9000 and LF9080 will replace LF9001. LF9000 and LF9001 will no longer be available for order from Cummins Filtration. Customers with existing inventory of LF9000 and LF9001 should continue to use these filters, moving to LF9070 and LF9080 once stock has been depleted.
